

PAVIS CONNECT THE SMART INTERFACE

Ongoing digitization and increasing data complexity bring further challenges to corporate IP departments and IP law firms. At the same time, companies are trying to focus on their core issues and free up resources. For this reason, PAVIS focuses specifically on process automation and on simple and secure data transfer.

Our solution – the fully automatic interface PAVIS Connect

Real-time communication

The **most secure** way of transferring data

PAVIS has developed the **leading technology** for xml-based interfaces

1st objective: Maximising efficiency

SCENARIO

Lack of resources, high workloads

2nd objective: Improved data management

SCENARIO

Complex data management, often poor data quality, incompleteness of digital files

PROBLEM

Too many administrative tasks for the IP team
Manual tasks, email traffic, delays

1

Data volume and data complexity are constantly increasing
Multiple data formats and sources, continuous requirement to clean and update data.

CONSEQUENCES

Not enough time for core tasks
Important topics are not being dealt with

2

Waste of manual resources
Error-prone and unreliable data
Delays caused by non-automated tasks
Risk of loss of IP rights

SOLUTION: PAVIS CONNECT

Operate directly via your own IP management software
Current data, costs and status made available immediately
Digital data exchange

3

Fully automated data transfer directly from the client IPMS
Immediate alerts in the event of incorrect formats and missing data
All deadline-relevant data are always up-to-date and from one source

BENEFIT

All information directly available when it is needed
Transaction monitoring, access to current data at any time
No more drafting of – and replying to emails
Fewer control checks required

4

Always up to date through immediate data exchange
Improved data quality through increased timeliness and consistent formats
Reduction of risks caused by faulty data
Lower costs through reduction of manual effort

RESULT

Reduction of administrative burden:
More freedom to concentrate on core tasks
Higher efficiency resulting in higher competitiveness

5

Data immediately available to make important decisions
Improved communication with clients and/or internal customers
Freeing up time to spend on essential tasks
Increased efficiency

3rd objective: Improving budget and resource planning

SCENARIO 1

Increasing competition, rapid technical developments

SCENARIO 2

Fast and reliable analysis of large, complex data sets required
Consideration of frequently changing country rules

PROBLEM

IP rights management often causes unnecessarily high costs which are difficult to forecast
A reliable budget is still required

1

Data complexity makes it difficult to calculate costs reliably in the long term
Staff need an overview at all times in order to be able to justify budget approvals quickly, reliably and comprehensibly

CONSEQUENCES

Budgets and resources cannot be planned efficiently and are therefore lacking for the core issues

2

Budgets are exceeded and additional costs incurred through inaccurate planning
Costs that are difficult to understand lead to refusal of budget proposals and missed opportunities

SOLUTION: PAVIS CONNECT

Tech-enabled management and renewal of all IP data in one central location (IP management system)

3

Immediate, tech-enabled data processing and analysis based on the most up-to-date data available
Cost forecasts taking into account all current country-specific rules

BENEFIT

Process standardisation and automation
Reduction of administrative burden and costs

4

Outsourcing of purely administrative tasks
Reliable and fast evaluations without manual effort
Price overview available at any point in time
Staff is reliably informed about costs

RESULT

Reduction of unnecessary costs and more budget available for core issues

5

Staff can concentrate on decision-making and complex tasks
Decision-makers have an efficient, reliable and sound basis for budget approvals
